

PAULA STRADIŅA
KLĪNISKĀ UNIVERSITĀTES
SLIMNĪCA

Kontaktpersona: Reičela Heinrihsone, Stratēģiskās plānošanas eksperte, Attīstības un stratēģiskās plānošanas daļa, reicela.heinrihsone@stradini.lv

1. Continuity of care: keeping track of chronic patients in the long-term, risking loss to follow-up due to fragmented care and data systems

Build integrated tracking tools and predictive models to ensure coordinated, continuous care across settings.

2. Development and integration of real-time remote patient monitoring systems

Development of smart algorithms and interoperable systems that enable safe, efficient use of home-generated data in clinical care.

3. Development of biotech innovations that match the needs of clinicians

Co-create solutions through translational research and clinical immersion programs. Examples include stroke detection tools, robotic surgery platforms

4. Underutilized patient data use due to underdeveloped infrastructure.

Develop secure, compliant platforms and consent models for data-driven research.
